NTOUCH

Ritas First...

Ritas name has been on textiles market since 1960's. It is a quiet long-established company from Turkey. We have a number of activities in textiles, industrial packaging. The main production fields are technical woven fabrics, fibers, acrylic yarns, big-bags, PET bottle preforms and finally nonwovens. Ritas has been listed in the top 1000 exporters of Turkey by TIM for years.

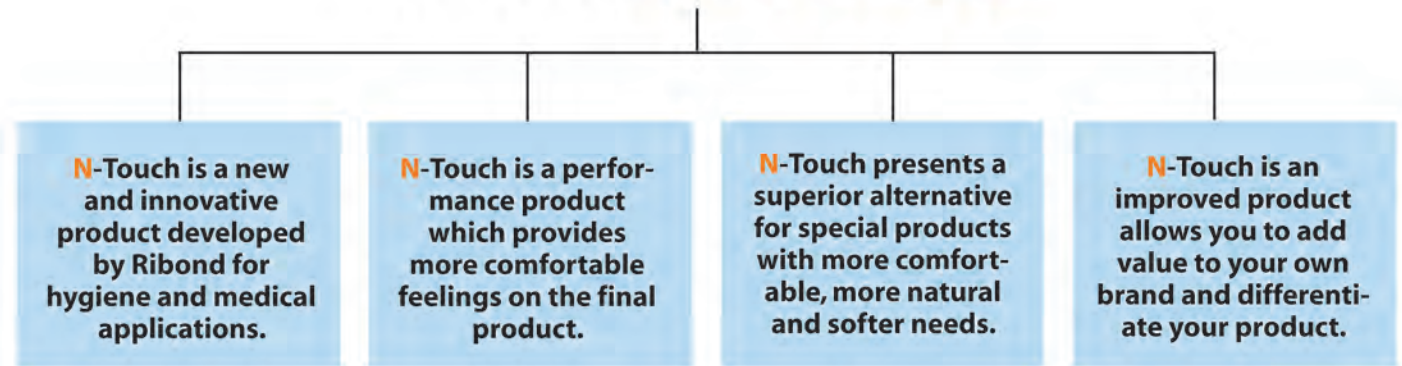

Ribond for Nonwovens...

Ribond is one of the brands and sub-production plant of Ritas. Under Ribond we focus on nonwoven production. We specialize in spunmelt technologies and offer product solutions to our customers. Our main activity fields are hygiene, bedding & furniture, medical, packaging, and agricultural applications. We are focusing on not only producing high quality products, but also understanding our customers' needs and market trends. We give our effort to adopt and improve ourselves to our customers' up to date requirements. This improvement arises in different functions like upgrading our machinery, environmental awareness, simplification of our processes as well as in our supply chain.

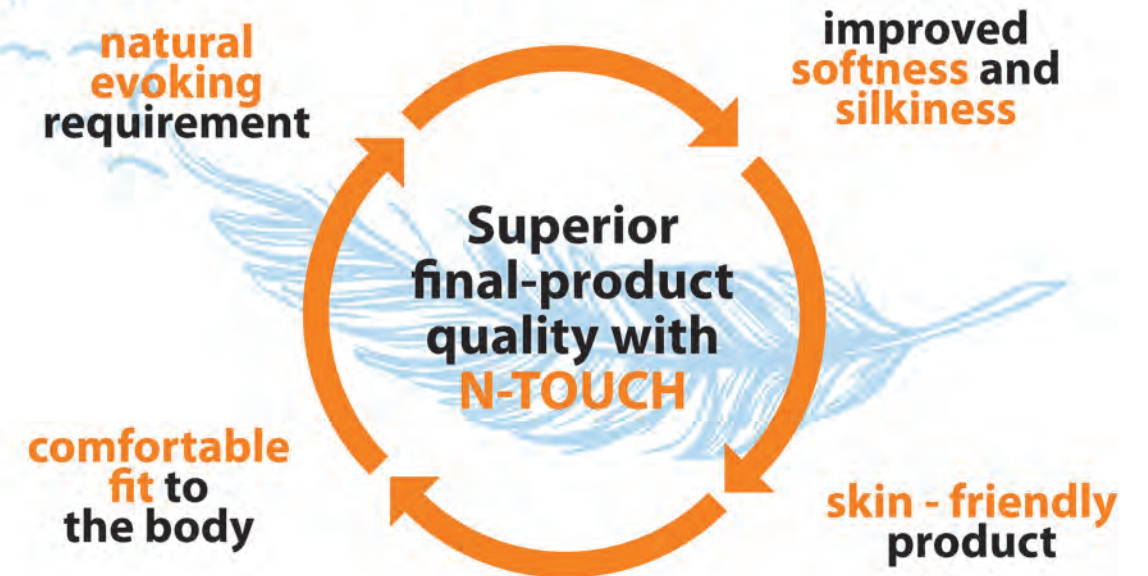

We believe in that we are only a piece of chain in the whole supply chain. We present a meaning with our suppliers and our customers. The product travels through the end-user of the chain and the information feeds back. This communication allows us to understand each other, improve ourselves and makes the chain an alive organization.

As a part of this chain we make effort to improve it. With this point of view we are proud to introduce you our newly developed product N-Touch. N-Touch is our new baby but it offers you an alternative solution to improve your own product too. It will be a new link in our supply chain.

What is **N-TOUCH**?

Why you should try **N-TOUCH**?

HYGIENE AND ABSORBENT PERSONAL CARE PRODUCTS

N-Touch Top-sheet

Top-sheet is the largest part which is in touch with the skin. It makes top-sheet the most delicate component of a diaper. While liquid transfer is a performance criteria for topsheet, comfort is also another key factor. This softer N-Touch top-sheet ensures natural evoking feelings and drive your product to forward.

Moreover, N-Touch has an advantage of energy consumption of ultrasonic bonding processes. It is better and quicker welded compared to soft purpose bi-co spunbond top-sheets and provides an energy save & cost efficiency.

N-Touch Leg Cuff

Leg cuff components are in contact with our inguinal joints. That's why, with our move, those areas are more likely to be irritated. N-Touch leg cuff helps you to avoid irritation and rush with its softer touch. Furthermore, N-Touch stimulates less to the skin on the inguinal joints so it will help to body to reduce the perspiring.

On the other hand, for especially adult incontinence applications, N-Touch allows a more-silent-experience to consumers. With N-Touch leg-cuffs, the rush noise is avoided with the move This provides a better self-confidence to the target audience while consuming those incontinence products and a real reason to choose your product **among substitutes**.

N-Touch Backsheet Lamination Fabric

Backsheet is the first impression for a diaper since we firstly meet and touch the backsheet component. That's why, it is important to have an impressive backsheet. With its softer hand-feeling, N-Touch backsheet fabric ensures a natural perception to the mothers and the end-users at the very first meeting with the diaper. It will help to move your products to upper segments in the market.

Moreover, N-Touch backsheet fabric has an easy processability and drapability. It has both breathable and non-breathable options.

N-TOUCH MEDICAL DRAPE

N-Touch Medical Drape

N-Touch medical drape is a superior Spunbond alternative for medical applications. First of all, it has a better anti-static property by itself. It provides a better drapability and it helps to reduce the costs and improve the production efficiency.

Also, by providing the smoother feeling, the end users will be pleasant to wear it. N-Touch helps to feel more comfortable. N-Touch allows to be silent to your products by avoiding the rustle while using them. Also N-Touch wrinkles noticeably less when compared to standard Spunbond products.
